

Workplace Charter – Team 2

School of Engineering · MSc Robotics · AERO62520 Robotic Systems Design Project

1. Statement of Purpose

This charter shows how our five-person project team plans to collaborate on the Robotic Systems Design Project. It outlines our team's common expectations, responsibilities, and methods to interact reach decisions, and handle disagreements. Our goal is to maintain a fair, respectful, and effective work environment where each member can contribute and help us achieve our project objectives. The charter serves as a reference to maintain professionalism, cooperation, and good relationships throughout the project. We'll often look over and revise the charter as necessary. Every change must be approved by our team members before they can take effect.

2. Statements of Principles and Commitments

We are united by a number of common values: respect, honesty, responsibility, quality and ongoing learning on the job. Firstly, we appreciate all perspectives from all members of the community and want to ensure that everyone feels included in a professional manner where ideas can be openly discussed. Secondly, we over-communicate and push back as something is unclear or not moving in right direction, so the problem gets solved quick without misunderstanding. Third, as they go ahead and all take their own duty on each other side agreed, in advance tell your team if there is any possibility which will impact the progress or may slow down. We aspire to maintaining high standards of work, give and receive constructive feedback, approach with curiosity and learn from failure as we collectively grow throughout the project.

3. Team Rules

- **Working Hours and Availability**

Everybody from the team will be working from 14:00hrs to 16:00hrs on Mondays , 11:00hrs to 13:00hrs on Tuesdays and 15:00hrs to 16:00hrs on Wednesdays . Weekend work is only scheduled when deadlines require it. Everyone updates their weekly availability on Sunday evenings so that appropriate changes and adjustments can be made.

- **Communication**

English is the only language used for all team communication to ensure that everyone can participate equally. We use the group chat in Whatsapp/WeChat for quick updates, reminders, and short discussions, while important decisions are summarised and stored and file transfers are done in the shared workspace like Microsoft Teams for future reference.

- **Meetings**

We hold at least one formal meeting each week, either in person or online, to review progress, discuss any issues faced during the week, and work together to find solutions.

- **Deliverables and Quality**

All work must meet project standards before submission. We check accuracy, give feedback, and make improvements promptly. Team members are expected to review their own work before submission and cross-check with others when necessary.

- **Attendance and Punctuality**

Be on time for meetings and inform the team early if you cannot attend. Members who miss meetings should review the shared notes and catch up before the next discussion.

- **Roles and Responsibilities**

Team roles rotate regularly. Each member takes responsibility and supports others when needed. This structure ensures equal participation and helps everyone build a broad range of teamwork skills.

4. Daily Activity Conflict Avoidance

We keep communication open to prevent small issues from becoming major problems. Team members share brief progress updates in the group chat and use a shared checklist to track ongoing tasks. If someone encounters difficulties, they raise them during weekly meetings so the team can provide support and stay coordinated. Feedback is given respectfully and focuses on improving the work rather than assigning blame. When disagreements occur, we discuss them early and find fair solutions together.

To maintain smooth teamwork, we also follow these practices:

- Conduct short daily check-ins to confirm task progress and priorities.
- Record important updates or changes in the shared workspace for visibility.
- Use clear and polite language in all forms of communication.
- Encourage early discussion of potential issues before they escalate.
- Share thoughts and suggestions after completing each major task to help the team improve together.

5. Conflict Resolution Flowchart

This section explains how our team manages conflicts at different levels of severity. Minor issues are resolved in private by the members having direct conversations. Moderate conflicts are discussed with the team to reach a fair agreement with help from the team leader if needed. Serious conflicts are reported to the relevant university support services or the course supervisor for a formal resolution.

The flowchart below outlines the steps for recognizing, addressing, and resolving conflicts in a fair and respectful manner.
